

Introduction

The reason why we had to write the continuation of Insolvency Prophylaxis I (2004)

The worldwide economic disaster plus the dimension of the damage suffered by the Euro, these two factors calculated 10 to the power of 12 is what the insolvency virus has caused to the world and to the German Economy. If we look at the interim financial statement of the 3rd quarter of 2009 it becomes very clear that only a dreamer can declare this all as untrue. The above mentioned two factors cannot be controverted through modern PR as if it were just the bad image of a product. A small economical accident or a medium type of global economical problem can be controverted through fading out, distraction or extenuation. But a worldwide implosion of the financial markets as in the 2008/2009 scenario cannot! Since 1998 we have been warning and indicating, first regularly but then also diligently, that the German economy was going to suffer under catastrophic consequences. The apocalypse has now eventuated and cannot be sat out or ignored as something that will resolve by itself. The conclusions and action proposals that we mentioned in Insolvency Prophylaxis I (2004) were noticed and praised from all sides, but not converted or implemented by our government. That's why we had to write the continuation based on the actual up to date status of the economical and financial data. Our book is to be the counterpoint to the illusionary solutions projected by governments and parliaments worldwide. Our book shall also counteract against the extremely dangerous mixture of superficial and pretended knowledge which has led to a playing down of the dangers: We cannot live with this global economical and financial catastrophe; we can at the utmost survive it but we may under no circumstances feel accommodated with this crisis and not at all arrange ourself homely with it. So how will the German Economy and our country survive the shock wave of the Super Recession? The answer to this question can be found in our extremely focused Master plan that we have set up as a solution for the financial restructuring of the world economy.

The reason why Insolvency Prophylaxis II should be considered as compulsory reading for the government and the German citizens.

Without a radical turnaround of the international economic, financial and regulatory policies, and without a new quality of the networking in international partnerships the downturn of the world economy will be unstoppable. That's why it is so staggering to see that one year already passed by without real progress in the fight against the Great Depression: Neither Washington, nor London, Paris or Berlin have been able to set the course or future direction right. That's why our book is to be a bipartisan combat organ for all democrats who are not willing to accept the defiant stubbornness of the world leaders, their loss of reality and their mockery of the people. It is this kind of behavior that results in sullenness and animosity of parties and their politics. Our book shall produce the necessary braveness to face up to this.

We have written the continuation of Insolvency Prophylaxis I (2004) to conquer and overcome the rock bottom of our economic and financial policy: The Master plan to restructure the world economy (Insolvency Prophylaxis II 2010). Only a shock treatment can be the cure for the German Government and interact against their uncontrolled governmental plans to save the banks. Plans with an absurdity as never seen before in German history. A shock treatment with an exact anamnesis of the economical, fiscal and political situation that will lead to a confession of the truth to the German citizens: This book describes how the Master plan really functions, how things need to be interlinked and how a national bankruptcy of the western democracies can still be prevented. Specific knowledge and political willingness are the preconditions to free the German people out of the role of just being a tolerating tax payer and become politically more competent. We, as an author's pool, have set ourselves the clear task and assignment to create this knowledge and raise the required storm of motivation that will effectuate political actions in order to create the necessary power for our people to focus on the plan of reconstruction with a clear mind and a gladiatorial heart.
